Description: Cell line HeLa GFP-LC3-RFP-LC3deltaG is a Cancer cell line with a species of origin Homo sapiens (Human)

Sex: Female

Disease: Human papillomavirus-related endocervical adenocarcinoma

Defining Citation: [PMID:27818143](#)

Comments: Characteristics: Stably expresses EGFP-LC3-mRFP-LC3delta, an autophagic flux probe. GFP-LC3 is fused to the N-terminus of RFP-LC3 whose C-terminal glycine is deleted. When expressed, the probe is separated into EGFP-LC3 and mRFP-LC3deltaG by the action of endogenous ATG4 family proteases that cleave the peptide bond after the C-terminal glycine of LC3 in the cytosol producing equimolar amounts of EGFP-LC3 and mRFP-LC3deltaG., Population: African American.
