Description: Cell line SK-HEP-1-Cas9-728 is a Cancer cell line with a species of origin Homo sapiens (Human)

Sex: Male

Disease: Liver and intrahepatic bile duct epithelial neoplasm

Comments: Karyotypic information: Has lost chromosome Y (from parent cell line SK-HEP-1)., Characteristics: Transduced with a Cas9-FLAG-Neo construct., Population: Caucasian., Problematic cell line: Misclassified. Parent cell line (SK-HEP-1) was originally described as originating from an adenocarcinoma of liver and thus classified as hepatocellular carcinoma. Later studies show that it most probably has arisen from endothelial cells..
