Description: Cell line HEK293-DR-GFP-RAD51D-16/D+ is a Transformed cell line with a species of origin Homo sapiens (Human)

Sex: Female

Comments: Characteristics: Transfected with the tetracycline transactivator (tTA) protein, a fusion of tetR with the activation domain of HSV-1 VP16., Characteristics: Transfected with the hprtDR-GFP reporter construct that targets the DR-GFP into the hprt locus and includes a dominant selectable puroR marker. The DR-GFP construct which contains a tandem repeat of two inactive genes coding for EGFP. After transfection with an expression vector coding for the I-SceI enzyme, recombination induced by the cleavage of the I-SceI site recreates a functional EGFP., Characteristics: The parental RAD51D KO cell line is functionally reconstituted by retroviral transfection of RAD51D.

Category: Transformed cell line

Organism: Homo sapiens (Human)
