Comments: Please visit <https://doi.org/10.1101/2025.07.29.667471> for bioRxiv preprint. The Addgene sequence result contains f1 ori, while the depositor provided reference does not. Additionally, the region with AmpR and ori is inverted in the Addgene sequence result when compared to depositor-provided reference sequence. The depositor confirms these discrepancies do not affect plasmid function.
