Comments: Please visit for <https://www.biorxiv.org/content/10.1101/2021.09.21.461278v4> bioRxiv preprint. There is a single nt discrepancy in Pgpc-1. This does not affect the plasmid's function. The SNPs in pcex-1 do not change the expression pattern of Pcex-1. We observed pattern expression in RIM interneuron only. In addition, the SNP in worm mCherry also does not affect the expression or fluorescence of the RFP.
