Vector Backbone Description: Backbone Marker:Promega; Backbone Size:3426; Vector Backbone:pGL3; Vector Types:STAP-seq screening vector; Bacterial Resistance:Chloramphenicol and Ampicillin

Comments: to construct the STAP-seq screening vector from pGL3 Promoter we replaced the sequence between the BglII and FseI sites with the following sequence, containing a ccdB suicide gene next to the Chloramphenicol resistance gene flanked by homology arms (used for cloning the candidates during library generation), an intron (mhc16), an ORF (truncated sgGFP, Qbiogene, Inc)
