Vector Backbone Description: Backbone Marker:Invitrogen; Backbone Size:4673; Vector Backbone:pFast Bac 1; Vector Types:Insect Expression; Bacterial Resistance:Ampicillin

Comments: Sequencing of the *C. elegans* Myo9 cDNA that was obtained by reverse transcription-PCR revealed that it differed from the HUM-7 amino acid sequence at two positions. Residues 608–615 (VSPISPFW) were missing, and residues 731KKSAG735 were replaced by 731KSESAG736. Our deduced Myo9 amino acid sequence changes matched perfectly with the predicted Myo9 sequences for *Caenorhabditis briggsae* and *Caenorhabditis remanei*.
