## AICSDP-72:TFAM-mEGFP

RRID:Addgene\_159745

Type: Plasmid

### Proper Citation

RRID:Addgene\_159745

### Plasmid Information

**URL:** <http://www.addgene.org/159745>

**Proper Citation:** RRID:Addgene\_159745

**Insert Name:** TFAM Homology Arms with linker-mEGFP

**Organism:** Homo sapiens

**Bacterial Resistance:** Ampicillin

**Vector Backbone Description:** Vector Backbone:pUC57; Vector Types:Mammalian Expression, CRISPR, Donor Template; Bacterial Resistance:Ampicillin

**Comments:** This plasmid has been used with locus-specific CRISPR/Cas9 to add a mEGFP tag to the C-terminus of human TFAM in WTC-11 human induced pluripotent stem cells by the Allen Institute for Cell Science. Linker (AA) sequence: GGGS. After protein tagging using this donor template plasmid and CRISPR/Cas9 reagents, transfected cells may exhibit varying intensity levels of fluorescence, likely due to editing precision. To obtain cells of uniform intensity levels, see our protocol for fluorescence-assisted cell sorting and subcloning of transfected cells (<https://www.allencell.org/instructional-videos-and-tutorials-for-cell-methods.html>). Further, we recommend PCR-based assays for identifying precisely edited clones as previously described (<https://www.molbiolcell.org/doi/abs/10.1091/mbc.e17-03-0209>). For more information on the entire plasmid collection, please see <https://www.addgene.org/allen-institute-cell-science/>.

**Plasmid Name:** AICSDP-72:TFAM-mEGFP

**Relevant Mutation:** homology arms contain point mutations to disrupt crRNA binding sites used, and WTC-11 specific homozygous SNP(s)

**Record Creation Time:** 20220422T221904+0000

**Record Last Update:** 20260815T080831+0000
