Vector Backbone Description: Backbone Marker:EMD Biosciences; Backbone Size:3700; Vector Backbone:pET23b; Vector Types:Bacterial Expression; Bacterial Resistance:Ampicillin

Comments: MMP7 sequence in the plasmid is suitable for expression in bacteria but NOT in mammalian cells, as the signal sequence is not included. The MMP7 amino acid sequence starts at amino acid 18 when compared to GenBank accession number NP_002414.1. Note that a superfluous methionine corresponding to the start signal for translation is present at the N-terminus of the expressed protein Please note that the His tag present in the vector is not in-frame with MMP-7
