Proper Citation: MeSH (RRID:SCR_004750)

Description: A controlled vocabulary thesaurus that consists of sets of terms naming descriptors in a hierarchical structure that permits searching at various levels of specificity. MeSH, in machine-readable form, is provided at no charge via electronic means. MeSH descriptors are arranged in both an alphabetic and a hierarchical structure. At the most general level of the hierarchical structure are very broad headings such as Anatomy or Mental Disorders. More specific headings are found at more narrow levels of the twelve-level hierarchy, such as Ankle and Conduct Disorder. There are 27,149 descriptors in 2014 MeSH. There are also over 218,000 entry terms that assist in finding the most appropriate MeSH Heading, for example, Vitamin C is an entry term to Ascorbic Acid. In addition to these headings, there are more than 219,000 headings called Supplementary Concept Records (formerly Supplementary Chemical Records) within a separate thesaurus. The MeSH thesaurus is used by NLM for indexing articles from 5,400 of the world's leading biomedical journals for the MEDLINE/PubMED database. It is also used for the NLM-produced database that includes cataloging of books, documents, and audiovisuals acquired by the Library. Each bibliographic reference is associated with a set of MeSH terms that describe the content of the item. Similarly, search queries use MeSH vocabulary to find items on a desired topic.

Abbreviations: MeSH

Synonyms: MeSH (Medical Subject Headings), Medical Subject Headings

Resource Type: controlled vocabulary, data or information resource

Keywords: umls, database, health, thesaurus, medical, gold standard

Availability: Free

Resource Name: MeSH

Resource ID: SCR_004750

Alternate IDs: nlx_75424

Alternate URLs: <http://purl.bioontology.org/ontology/MESH>

Record Creation Time: 20220129T080226+0000

Record Last Update: 20260807T042613+0000
