Proper Citation: Baylor College of Medicine Department of Neuroscience (RRID:SCR_007225)

Description: Department offers graduate and postgraduate programs that provide students with intensive education and training in neuroscience, along with opportunity to excel in laboratory. Our program brings together researchers from diverse backgrounds to study brain and its function in health and disease. Educational experiences are provided by faculty members actively involved in research into function of central nervous system through experimentation in molecular neurobiology, neuroanatomy, neurodevelopment, neural systems analysis, biophysics, imaging, and computer-assisted neural system modeling. Ongoing studies in our department range from molecular biophysics of ion channels and receptors, to analysis of neuronal development, signal processing, brain circuitry, and animal behavior all the way to human brain function.

Synonyms: BCM; Dept. of Neuroscience
