Description: The Behavioral Neuroscience program's focus is on the delineation and analysis of perceptual, cognitive, linguistic, affective, and behavioral disorders observed in neurologic disease, as these disorders contribute to an understanding of normal brain function and its modification by pathology. The subject matter derives chiefly, but not exclusively, from clinical populations with neurological disorders affecting higher processes, particularly from the study of syndromes involving selective impairment of functional systems such as memory, language, or purposeful movement. Current methods of clinical assessment, cognitive psychology, experimental design, and the neurosciences are integrated into a broad program of clinical and basic research. The Behavioral Neuroscience Ph.D. Program is administered through the Division of Graduate Medical Sciences, BUSM, by faculty members of the Department of Neurology, Division of Psychiatry, and Anatomy & Neurobiology, BUSM (holding joint appointments at the Department of Veterans Affairs [VA] Medical Centers in Boston or Bedford, MA). Only the doctoral program is offered (no master's degree). The Program is not designed to meet requirements for accreditation as to clinical competence in psychology nor in any discipline which has a certification procedure. It does, however, accept students in the M.D./Ph.D. Program at Boston University School of Medicine, or other students enrolled elsewhere in related programs (including the Master of Arts in Medical Sciences Program), to take some or all of the offerings. Boston University School of Medicine is an accredited institution. Behavioral Neuroscience is a degree-granting Program having the same representation as other Ph.D.-granting Departments in the Division of Graduate Medical Sciences.
