Proper Citation: dbPTM: An informational repository of proteins and post-translational modifications (RRID:SCR_007619)

Description: dbPTM is a database that compiles information on protein post-translational modifications (PTM) such as the modified sites, solvent accessibility of surrounding amino acids, protein secondary and tertiary structures, protein domains, and protein variations. The version 2.0 of dbPTM integrates the experimentally validated PTM sites with referable literatures from Swiss-Prot, Phospho.ELM, O-GLYCBASE, and UbiProt. In all of the collected PTM information, about 25 types of PTM with enough experimentally validated sites are trained the profile hidden Markov models (HMMs) to detect the potential PTM sites with 100% specificity against Swiss-Prot proteins. To help users investigating more detail in each type of PTM, the substrate peptide specificity such as positional amino acid frequency, solvent accessibility and secondary structure surrounding the modified sites are also provided. Moreover, the information of orthologous protein clusters is provided to users for analyzing whether the PTM sites located in the evolutionary conserved regions or not., THIS RESOURCE IS NO LONGER IN SERVICE. Documented on September 16,2025.

Synonyms: dbPTM

Resource Type: data or information resource, database

Keywords: protein, protein post-translational modification, ptm

Availability: THIS RESOURCE IS NO LONGER IN SERVICE

Resource Name: dbPTM: An informational repository of proteins and post-translational modifications

Resource ID: SCR_007619

Alternate IDs: nif-0000-02730

Record Creation Time: 20220129T080242+0000

Record Last Update: 20260815T182854+0000

Ratings and Alerts

No rating or validation information has been found for dbPTM: An informational repository of proteins and post-translational modifications.

No alerts have been found for dbPTM: An informational repository of proteins and post-translational modifications.
