Proper Citation: BioModels.net (RRID:SCR_010525)

Description: For computational modeling to become more widely used in biological research, researchers must be able to exchange and share their results. The development and broad acceptance of common model representation formats such as SBML is a crucial step in that direction, allowing researchers to exchange and build upon each other"s work with greater ease and accuracy. The BioModels.net project is another step: an international effort to: 1. define agreed-upon standards for model curation 2. define agreed-upon vocabularies for annotating models with connections to biological data resources 3. provide a free, centralized, publicly-accessible database of annotated, computational models in SBML and other structured formats To facilitate assembling useful collections of quantitative models of biological phenomena, it is crucial to establish standards for the vocabularies used in model annotations as well as criteria for minimum quality levels of those models. The BioModels.net project aims to bring together a community of interested researchers to address these issues. We are working towards defining these standards through white papers and process definitions. All of the products of our efforts are open and freely available through this site.

Resource Type: narrative resource, portal, standard specification, data or information resource, international standard specification, topical portal

Funding:

Resource Name: BioModels.net

Resource ID: SCR_010525

Alternate IDs: nlx_20867

Record Creation Time: 20220129T080259+0000

Record Last Update: 20250509T055925+0000

Ratings and Alerts

No rating or validation information has been found for BioModels.net.

No alerts have been found for BioModels.net.
