Description: Project related to auditory behavioral task data collection. Provided high throughput operant conditioning in mouse homecage system was developed by University of Maryland, College Park, scientists. Automated system for training up to hundreds of mice in auditory behavioral task features custom Matlab GUI running on desktop which connects to Raspberry Pi to administer auditory stimuli from USB soundcard and collects auditory data as well as licking data from water spout with commercially available capacitive sensors. Parts list and build instructions are readily available from paper and associated GitHub repository.
