Proper Citation: Resting State Hemodynamic Response Function Retrieval and Deconvolution (RRID:SCR_023663)

Description: Software toolbox for resting state HRF estimation and deconvolution analysis. Matlab and Python toolbox that implements HRF estimation and deconvolution from resting state BOLD signal. Used to retrieve optimal lag between events and HRF onset, as well as HRF shape. Once that HRF has been retrieved for each voxel/vertex, it can be deconvolved from time series or one can map shape parameters everywhere in brain and use it as pathophysiological indicator. Input can be 2D GIfTI, 3D or 4D NIfTI images, but also on time series matrices/vectors. Output are three HRF shape parameters for each voxel/vertex, plus deconvolved time series, and number of retrieved pseudo events. All can be written back to GIfTI or NIfTI images.

Abbreviations: rsHRF

Resource Type: software toolkit, software resource

Defining Citation: [PMID:34560269](#)

Keywords: hemodynamic response function, HRF estimation and deconvolution, resting state BOLD signal, GIfTI images, NIfTI images, brain

Funding: National Natural Science Foundation of China ;
Fund for Scientific Research-Flanders ;
European Union Horizon 2020 Framework Programme

Availability: Free, Available for download, Freely available

Resource Name: Resting State Hemodynamic Response Function Retrieval and Deconvolution
