Proper Citation: Integrating Network Objects with Hierarchies (RRID:SCR_002084)

Description: THIS RESOURCE IS NO LONGER IN SERVICE. Documented on October 28, 2025. INOH (Integrating Network Objects with Hierarchies) is a pathway database of model organisms including human, mouse, rat and others. In INOH, the term pathway refers to higher order functional knowledge such as relationships among multiple bio-molecules that constitute signal transduction pathways or biological events in general. As most part of this knowledge resides in scientific articles, the database focuses on curating and encoding textual knowledge into a machine-processable form. The system provides pathway information as a composite of biological events, since functional knowledge is usually described as a set of fragmented processes. Each event is annotated with entries of a event ontology, which also has links to GO.

Synonyms: INOH

Resource Type: controlled vocabulary, data or information resource, database, ontology

Defining Citation: [PMID:22120663](#)

Keywords: biomolecule, human, mouse, pathway, rat, transduction

Availability: THIS RESOURCE IS NO LONGER IN SERVICE

Resource Name: Integrating Network Objects with Hierarchies

Resource ID: SCR_002084

Alternate IDs: nif-0000-20859

Record Creation Time: 20220129T080211+0000

Record Last Update: 20260821T193638+0000

Ratings and Alerts

No rating or validation information has been found for Integrating Network Objects with Hierarchies.

No alerts have been found for Integrating Network Objects with Hierarchies.
