Proper Citation: CleanLine (RRID:SCR_002233)

Description: An EEGLAB plugin which adaptively estimates and removes sinusoidal artifacts from independent component analysis (ICA) components or scalp channels using a frequency-domain (multi-taper) regression technique with a Thompson F-statistic for identifying significant sinusoidal artifacts. This approach has been advocated by Partha Mitra and Hemant Bokil (Observed Brain Dynamics, Chapter 7.3.4., 2007) and CleanLine utilizes modified routines from the Mitra Lab's Chronux Toolbox (www.chronux.org). Sinusoidal noise can be a prominent artifact in recorded electrophysiological data. This can stem from AC power line fluctuations (e.g. 50/60 Hz line noise + harmonics), power suppliers (e.g. in medical equipment), fluorescent lights, etc. Notch filtering is generally undesirable due to creation of band-holes, and significant distortion of frequencies around the notch frequency (as well as phase distortion at other frequencies and Gibbs rippling in the time-domain).

Abbreviations: CleanLine

Resource Type: software resource

Keywords: eeg, meg, electrocorticography, spectral analysis, temporal transformation

Availability: GNU General Public License

Resource Name: CleanLine

Resource ID: SCR_002233

Alternate IDs: nlx_155529

Record Creation Time: 20220129T080212+0000

Record Last Update: 20260905T132445+0000

Ratings and Alerts

No rating or validation information has been found for CleanLine.

No alerts have been found for CleanLine.
