Description: Core identifies and quantifies small molecules from variety of origins such as biological tissue, blood, serum, plasma, cell, cell medium, urine, feces, among others. Provides support for untargeted and targeted metabolite profiling, detecting such compounds as sugars and sugar phosphates, alcohols, amine and polyamines, amino acids, fatty acids, complex lipids, nucleotides, organic acids, phenolics, bile acids, steroids/hormones, neurotransmitters and neuromodulators, phthalates, and many more emerging metabolites. Helps execute projects, including protocol development, sample preparation, instrument method development, instrument data acquisition, and data processing.Multiple complementary analytical methods are utilized with mass spectrometers such as Agilent 6560 ion mobility Q-TOF and Agilent 6546 Q-TOF systems, in addition to our Thermo Fisher Q Exactive hybrid quadrupole-orbitrap, Thermo Fisher Altis triple quadrupole, Sciex 6500+ triple quadrupole, and Sciex 5500 hybrid triple quadrupole-ion trap (QTRAP), as well as gas chromatograph-mass spectrometers including Agilent 5977A, Agilent 5975C, and Agilent 5973.
