Description: Rattus norvegicus with name WKY-Dnd1^{ter}/Ztm from RGD.

Species: Rattus norvegicus

Notes: A spontaneous mutation (ter) leading to the formation of congenital ovarian and testicular tumors was detected in the WKY/Ztm rat strain. Sequence analysis detected a point mutation in exon 4 of the rat Dnd1, which introduces a premature stop codon assumed to cause a truncation of the Dnd1 protein. This recessive ter mutation has a complete penetrance of teratocarcinogenesis and infertility of both sexes in homozygous genotype.
