Description: Rattus norvegicus with name SD-Mir500 *em1Cgen* from RGD.

Species: Rattus norvegicus

Notes: Sprague Dawley rats by microinjection of TALENs in fertilized eggs (Cyagen Biosciences). Briefly, the rno-mir-500 gene (Gene ID: 100314112; MirBase accession no. MIMAT0005321), which was located on rat chromosome X, was selected as the TALEN target site. TALENs were constructed using the Golden Gate Assembly and confirmed by sequencing. The founder, which carried 8- bp deletion (GCACCTGG) in the both strands compared with the wild-type (WT) DNA sequence, were genotyped by PCR followed by DNA-sequencing analysis. After that, heterozygous F1 were produced by mating F0 with WT rats. Heterozygous F1 rats were determined and mated to produce homozygote mutant (mir-500^{+/?}) and WT (mir-500^{+/+}).
