Description: Rattus norvegicus with name SD-Pde6b^{em1Baek} from RGD.

Species: Rattus norvegicus

Notes: Cpf1 mRNA (50 ng per uL) and CRISPR RNA (100 ng per uL) were co-microinjected into the cytoplasm of pronuclear stage embryos; surviving embryos were transplanted into the oviducts of pseudo-pregnant surrogate mothers to generate live animals. A Pde6b-mutant rat line with an 11-bp deletion in exon 1 was established. Western blot analysis confirmed deficiency of Pde6b protein in the homozygous mutant retina, indicating successful generation of Pde6b-deficient rats with Cpf1-mediated gene targeting.
