Description: Rattus norvegicus with name DA.PVG.1AV1-(D10Got406-D10Rat93)/Kini from RGD.

Species: Rattus norvegicus

Notes: Inbred Dark Agouti (DA) rats were originally obtained from Hannover, Germany and Piebald Virol Glaxo(PVG) rats from Harlan UK Limited (Blackthorn, UK). Animals for congenic breeding were selected from the 10th generation of an advanced intercross line (AIL) originating from the EAE-susceptible DA and EAE-resistant PVG.1AV1 rat strains. Selected males containing a PVG.1AV1 fragment in the Eae18b region (from OT24.18 to D10Rat93 marker, at 68.36 Mb and 81.9 Mb, respectively) were backcrossed with DA females for 8 generations, and offspring was genotyped using microsatellite markers in each generation. In the 8th generation, heterozygous males and females were crossed to obtain the experimental population of homozygous congenic rats and littermate controls.
