Description: Rattus norvegicus with name SD-Cacna1f *csnb* from RGD.

Species: Rattus norvegicus

Notes: A naturally-occurring mutation in Cacna1f was identified in a male Sprague Dawley rat with the phenotype of congenital stationary night blindness. Sequence analysis revealed a point mutation of C to T at position 2941, which changes codon 981 from arginine (CGA) to a stop codon (TGA). This R981Stop point mutation was predicted to lead to a version of protein shortened by a total of 999 amino acids, and missing the C-terminal and, in particular, part of the third and all of the fourth ion transport domains.
