Description: Rattus norvegicus with name W-Gnrh1^{tm1}(cre)Aeh from RGD.

Species: Rattus norvegicus

Notes: This model was generated using zinc finger nuclease (ZFN) method. Cre recombinase was expressed under the control of the endogenous Gnrh1 gene by inserting an internal ribosomal entry site (IRES)-Cre cassette 30bp downstream from the translational stop site of the Gnrh1 open reading frame. This was achieved by pronuclear co-injection of zinc finger nucleases (ATCCACAACATCCGAGTGtgacattGACGCTGAGATCCATGAC; cleavage site in lower case) along with a donor plasmid containing two 800bp homologous arms (HA) flanking IRES-Cre into a one-cell stage rat embryo.
