Description: Rattus norvegicus with name SHHF^{cp/cp}/Mcc from RGD.

Species: Rattus norvegicus

Notes: The obese SHHF^{cp/cp} are homozygous for the corpulent allele. The Breeding stock for this colony was transferred to Dr. Sylvia McCune at the University of Chicago Medical School in 1983 from the laboratory of J.E. Miller at G.D. Searle and Company. The animals were developed by backcrossing the SHROB rat to the SHR/N rat. Dr. McCune obtained the colony after the seventh backcross and continued to inbreed past 20 generations to fix the congestive heart failure trait.
