Description: Rattus norvegicus with name SD-Esr1^{em1Bra}/ - from RGD.

Species: Rattus norvegicus

Notes: Two target sequences (GCCGTGTTCAACTACCCCGAGGG and GCTGCGCAAGTGTTACGAAGTGG) within the second and third exon, respectively, of the coding sequence of Esr1 (the rat gene encoding ER??) were selected. gRNAs targeting these sequences were synthesized via in vitro transcription. gRNAs (25 ng/ul each) were co- microinjected with Cas9 protein (40 ng/ul) into Sprague-Dawley rat embryos, and embryos were transferred into pseudo-pregnant recipients. Animals heterozygous for a 25 base pair deletion in Esr1 exon 3 were used to establish an ER alpha mutant colony and subsequent homozygous mutant offspring were obtained for study.
