Description: Rattus norvegicus with name LEW-Tg(EGFP)455Rrrc from RGD.

Species: Rattus norvegicus

Notes: This transgenic strain contains the enhanced green fluorescent protein gene under the control of the human ubiquitin-C promoter with a the woodchuck hepatitis virus posttranscriptional regulatory element (WRE). This transgenic strain was made by injecting the lentivirus vector containing the GFP construct (vector name FUGW) into Lewis rat embryos. [Rat Resource and Research Center](#)
