Description: Rattus norvegicus with name LE.Cg-(ROSA26) [em1\(CAG-Cas9*D10A\)Ottc](#) from RGD.

Species: Rattus norvegicus

Notes: This mutant strain was created using highly efficient CRISPR-Cas9-mediated homology-directed repair (HDR) in rat spermatogonial stem cell cultures. The CRISPR/Cas9 knock-in rats have cre recombinase-dependent expression of CRISPR associated protein 9 (Cas9) catalytic mutant protein D10A under the control of CAG promoter inserted to the rat ROSA26 locus. ROSA26 is a synonym for rat Thumpd3-as1 (RGD:6491660) and is used as an official symbol for rat strain nomenclature. The resulting mutant rats in Prague-Dawley background was backcrossed with WT LE for three or four generations for studies. [Rat Resource and Research Center](#)
