Description: Rattus norvegicus with name F344-Tg(CAG-ACE2)057BrydRrrc from RGD.

Species: Rattus norvegicus

Notes: The human ACE2 gene was placed under control of the synthetic CAG promoter which allows ubiquitous expression of the gene. Based on droplet digital PCR analysis, the strain carries only 1 copy of the transgene. The integration site is unknown. These rats express the human ACE2 gene. The encoded protein is a functional receptor for the spike glycoprotein of several human coronaviruses including SARS-CoV-2, the causative agent of coronavirus disease-2019 (COVID-19).
