Description: Caenorhabditis elegans with name ccTi1594 unc-119(ed3) III. from WB.

Species: Caenorhabditis elegans

Synonyms: ccTi1594 unc-119(ed3) III.

Notes: ccTi1594 [mex-5p::GFP::gpr-1::smu-1 3'UTR + Cbr-unc-119(+), III: 680195] III. GFP expression in germline. Transgene rescues unc-119(ed3). Improved GPR-1 overexpression transgene appears to be stably expressed in the germline at a wide range of temperatures and does not require special handling. (unlike other GPR-1 overexpressing transgenes previously described in the literature). The GPR-1 overexpression transgene consistently confers a high penetrance of non-Mendelian inheritance. Neomycin resistant. The genomic location of ccTi1594 is with respect to the WBcel235 assembly.|"Made_by: Christian Froekjaer Jensen"
