Description: Rattus norvegicus with name LH/MavRrrc from RGD.

Species: Rattus norvegicus

Notes: Lyon Hypertensive. In 1969 outbred Sprague-Dawley rats were selected for high systolic blood pressure using an indirect plethysmographic technique in pre-warmed, unrestrained, conscious rats. Three pairs were originally selected, and selection was continued with brother x sister mating. Strain LN was maintained as a normotensive control, and LL as a hypotensive strain. (see Vincent et al 1984, and Vincent and Sassard, 1994 for reviews). [Rat Resource and Research Center](#)
