Description: Rattus norvegicus with name SD-Ahr^{em1Soar} from RGD.

Species: Rattus norvegicus

Notes: CRISPR/Cas9 targeted deletion of the Ahr basic helix loop helix DNA binding domain of the rat Ahr was injected into the embryos of outbred HsdHot:SD. The gRNA was targeted to Exon 2 of the Ahr gene, which encodes the bHLH DNA binding domain (target sequence: CTTCTAAACGACACAGAGACCGG; corresponding to NM_001308254). The established Ahr null strain lacks responsiveness to Ahr ligands. [Rat Resource and Research Center](#)
