Description: Caenorhabditis elegans with name mnDp66 (X;l); meDf5 X. from WB.

Species: Caenorhabditis elegans

Synonyms: mnDp66 (X;l); meDf5 X.

Notes: Mutagen:Gamma Rays|"Produces 32% XO male self-progeny; nondisjunction is correlated with a high frequency of achiasmate X chromosomes in oocyte nuclei, and a reduced frequency of X chromosome crossovers. meDf5 disrupts the function of the cis-acting X chromosome meiotic pairing center. meDf5/+ heterozygotes produce 4-6% XO progeny, so the presence of meDf5 can be followed in heterozygotes by this weak Him phenotype."
