Description: Caenorhabditis elegans with name zhit-3 tftc-3(gk144)/mls10 V. from WB.

Species: Caenorhabditis elegans

Synonyms: zhit-3 tftc-3(gk144)/mls10 V.

Notes: Mutagen:UV/TMP|"This strain was provided by the C. elegans Reverse Genetics Core Facility at the University of British Columbia, which is part of the international C. elegans Gene Knockout Consortium, which should be acknowledged in any publications resulting from its use."|"ZK856.9, ZK856.13. mls10 [myo-2p::GFP + pes-10p::GFP + gut-promoter::GFP] V. WT GFP phenotype, with expression in 4-cell embryos, pharyngeal muscle and gut. Heterozygotes are WT with dim GFP signal in pharynx, and segregate WT with dim GFP, WT with brighter GFP (mls10 homozygotes), and non-GFP sterile Uncs with a vulval blip (gk144 homozygotes). mls10 suppresses recombination from unc-60 to about dpy-11 on LG V, and does not balance gk144 perfectly, but this strain is not difficult to keep. Pick dim GFP+ WT and check for correct segregation of progeny to maintain."
