Authors: Firouz Daneshgari

Group: Diabetic Complications Consortium

Summary: Cystometry is a test of bladder function in which pressure and volume of fluid in the bladder is measured during filling, storage, and voiding. A cystometry study is performed to diagnose problems with urination, including incontinence and urinary retention. This test should be done on the mice two days after SPT Implantation. Diabetic Complication: Reference 1. Cannon TW, Damaser MS: Effects of anesthesia on cystometry and leak point pressure of the female rat. Life Sci 69:1193-1202, 2001
