Authors: Jia Ren Lin

Group: Laboratory of Systems Pharmacology, NCIHTAN

Summary: The hematoxylin and eosin (H&E) stain is the standard used for microscopic examination of fixed tissue specimens. This procedure establishes a consistent process for the manual preparation of H&E-stained slides from FFPE tissue specimens. H&E staining is compatible with, and frequently performed after tissue-based cyclic immunofluorescence (t-CyCIF), enabling conventional histopathology review to be combined with fluorescence imaging.
