Summary: A step-by-step procedure for autologous platelet-rich plasma production was developed for topical percutaneous injection in donkeys. This protocol was used in the following publication: Faillace V, Tambella AM, Fratini M, Paggi E, Dini F, Laus F. Use of autologous platelet-rich plasma for a delayed consolidation of a tibial fracture in a young donkey. The Journal of Veterinary Medical Science, 79(3), 2017: 618-622.
